CAM TWIST Magnetic Breakaway

The only breakaway that gives you the option to easily disconnect, inspect and reconnect while installed. After a drive-off, inspect the O-ring surface, lubricate the O-ring surface, align the two halves and then push the unit back together.

With the breakaway, there is no need to drain assemblies to change a nozzle. Additionally, durable plastic covers prevent damage during a drive-off while decreasing maintenance and increasing security.

From plastic covers, repair kits, to heavy-testing requirements, Catlow has thought of it all so that you can rely on your equipment to stay in-tact during a drive-off while helping to preserve your forecourt.

Features and Benefits

- > UL/ULC listed
- > Meets NFPA 30A codes
- > CTMCA model is CARB Certified
- > Patented Magnetic Snap-back technology
- > Resists "Hydraulic Hammer" problems
- > Regular maintenance is not required but is available as an option
- > The only onsite, inspectable breakaway with no "remove by" date
- > Industry-leading, max separation force designed at 350 lbs.
- > Reduces environmental impact and ensures no leaking with a double O-ring seal
- > Consistent separation force after multiple reconnections
- > Payback after second drive-off
- > Fastest reconnect on the market
- > Minimal tools required for re-attachment
- > Replacement lower half of breakaway is available
- > 12-month warranty

Technology with a human touch.

Technical Data

Construction	
Body	Aluminum
Seal	Fluorocarbon, Nitrile
Cover	Nylon
