

Magnetic Liquid-Level Gauge

Applications

Models 8660 and 8680 are intended for stationary or mobile fuel tank applications containing middle distillates such as diesel and unless equipped with optional stainless steel support rods are not intended for use in fuels containing more than 10% ethanol or more than 30% bio-diesel. These gaugs are not intended for use in pressure vessles. Models with optional stainless steel supports may also be used for fuels containing ethanol, bio-diesel and interstitial applications. The 8600 Series is not recommended for off-road equipment.

General Information & Features

The 8660 spiral gauge is supplied with an easy to read, side-view fractional dial. The model 8680 spiral gauge is equipped with a standard top reading fractional dial.

All 8600 Series spiral gauges have a 1 1/2" MNPT tank connection and are suitable for tank pressure up to 25 psig maximum. They are designed for top mounting in tanks up to 30" deep are UL listed for flammable liquids.

Rochester gauge dials are magnetically driven. Fuel vapor cannot reach inside of the gauge lens and attack the UV rated lens material. Rochester gauges may be easily converted for remote output by simply installing the R3D Remote Ready dial and plug-in Hall Effect sender module.

See reverse side for dimensional data, materials of construction, performance and advice on how to order.

General Specifications*

Mounting

Designed for top-mounting only.

Accuracy

Accuracy depends upon gauge sizing. Direct read dials $\pm 8\%$. TwinSite™ dials $\pm 12\%$. Accuracy may be less depending upon tank shape. Accuracy may be less near full and empty. Accuracy may be less if tank is not level. All accuracy estimates are expressed as a percent of full scale.

Caution: This gauge is not a substitute for an automatic over-fill prevention device, which may be required for filling. This gauge is not to be used as an unattended means of determining tank overfilling. This document does not provide instructions for tank filling. Periodic annual operability checks may be required which are necessary to detect gauge malfunctions and/or inaccurate gauge readings. Gauge accuracy depends upon proper gauge sizing and installation. Release of tank contents as well as damage and safety hazard may result if tank is overfilled. Fuel exhaustion may occur if tank contents are less than indicated.

Temperature Range

Standard operating range is -40°F to 158°F , -40°C to 70°C .

Humidity

Paint exposed portion of gauge, less dial, for marine applications.

Shock and Vibration

Shorter sizes are suitable for some mobile applications

Tank Pressure

0 to 25 psig [0 – 1, 7 Bar] maximum.

Approval

8660 and 8680 are UL listed for flammable liquids.

Note: For gauge installation instruction see MS-516 Non-pressurizes Fuel Tanks.

Materials of Construction*

Head

Die-cast zinc.

Guide Rod

Zinc-plated steel, brass or stainless steel optional.

Centershft

Brass (Stainless steel optional).

Seal

Nitrile Rubber (Optional Viton Seal).

Tie Plate, Guide & Bearing Pin

Stainless Steel.

Float

Nitrile rubber.

Drive Magnetic

Neo.

Direct Reading Dial

Polycarbonate polyamide ultrasonically sealed.

Side-View Dial

Aluminum with polycarbonate crystal, hermetically sealed.

When ordering, specify:

1. Gauge model number.
2. Tank Depth.
3. Riser Height, if any.
4. Any special requirements.

*Materials and specifications are subject to change without notice.
