

Controlled Compression System

Featuring Rubber Fab's
Torque-Rite®

Rubber Fab

a Garlock Hygienic Technologies company

Torque-Rite®

Torque-Rite® converts your sanitary connections into a Controlled Compression System.

Torque-Rite® allows you to control compression and expansion while maintaining constant inch/pounds force insuring a controlled compression I.D. Torque-Rite® eliminates the problems associated with over- or under-tightening a seal which can lead to an unsanitary system.

Compression control is easy!

When tightened, the Torque-Rite®'s self-limiting internal mechanism will make an audible "click" signaling the user they have reached proper inch/pounds force. If further tightening is attempted, there will be more "clicks" but no additional application of force on the hygienic seal (if emergency conditions arise, the Torque-Rite® has a built-in manual override feature).

Problems with over-tightening or under-tightening a hygienic seal:

Over-tightening can tear or damage a seal and can also cause a damming effect inside the pipeline. A torn or extruded seal can hold soil and bacteria. Under-tightening leaves an undesirable concave area at the seal allowing soil and bacteria to become entrapped. Both conditions should be avoided in a sanitary system.

Maintaining a Controlled Compression Sanitary System

By maintaining a constant force on a Controlled Compression System with the Torque-Rite®, seal I.D. is maintained lowering bacteria count and enhancing product integrity. A Perfect Surface sanitary system is assured.

The Controlled Compression System

Torque-Rite® = Compression Control

DAMMING:

An over-tightened hygienic seal extrudes into the pipe, prevents draining, and allows deposits to build up behind the gasket.

UNDER-TIGHTENING:

May allow leakage. Can form concave surfaces at the product side of the hygienic seal affecting free drainage and cleaning.

PERFECT SURFACE HYGIENIC SEAL SYSTEM:

Torque-Rite® eliminates the concerns associated with over- & under-tightening a hygienic seal. Insures that seal I.D. matches pipe I.D.

Torque-Rite® Specifications

Material: 440C Stainless Steel
Hardness: 48 Rockwell
Overall Height: 1.670"
Driving Hex: .875 (7/8")
Body Diameter: .875"
Override Flats: .8125 (13/16")
Lot Traceable

Torque-Rite® is stocked in 3 models

**Model TR-30
and TR-40**

Recommended for

- Buna
- Silicone
- FKM Fluoroelastomer
- EPDM
- Tuf-Flex®

Model TR-50

Recommended for

- PTFE
- Tuf-Steel®
- PTFE Envelope

The Torque Tee

The Torque Tee also allows you to control compression and expansion while maintaining constant inch/pounds force insuring a controlled compression I.D. This eliminates the problems associated with over- or under-tightening a seal which can lead to an unsanitary system.

The Torque Tee and universal torque socket are designed to aid in clamp installation and removal. Available with a family of components, the Torque Tee handle creates effective tightening leverage and aids in reaching tight spaces, including over head and behind tanks.

Torque Tee Features

- Available in 30, 40, 50 and 70 in/lbs as a standard
- Works with different style hinge clamp wing nuts
- Torque Tee Wing Socket can be used independently on wing nuts or with Rubber Fab's Torque-Rite® nut
- T-shape creates effective leverage
- Fast easy one handed tightening in the right direction
- Provides an audible click when any factory preset torque is reached
- Reversing collar disengages the ratchet mechanism and locks the tool for conventional backing off and loosening
- Aircraft quality high alloy steel, chrome plated

Torque Accessories

Torque-Rite® Features:

- An audible "click" indicating correct inch/pounds force
- Maintains constant 30, 40 or 50 inch/pounds force
- Manual override feature
- Retrofits all sanitary clamps, mini through 6"
- Works in rupture disk applications
- Works with all Smart Gasket® products including spore trap, thermocoupler and sampler
- No torque wrench or special training required
- User friendly

NOTE: All elastomeric hygienic seals require periodic replacement. Seal life is influenced by the seal material, product application, temperature, cleaning procedures, etc. After monitoring seal condition in a process system, a schedule should be developed for periodic replacement of hygienic seals.

Smart Gasket, Torque-Rite, Tuf-Flex, Tuf-Steel and ADI Free are registered trademarks of Rubber Fab. Torque-Rite: United States Patent Number 6,082,941.
